Free Online Grammar/Spell Checkers

Here are some examples of free online grammar and spelling checkers:**

1. **GrammarCheck**

   GrammarCheck is an older, open-source grammar and spelling checker that was first created in the late 1990s. It's simple, fast, and easy-to-use. It will correct your spelling and grammar mistakes with a single click of a button!

2. **LanguageTool**

   LanguageTool is a free, open-source tool that offers premium paid upgrades, but the free tier is just as great. You can add it as an extension to Chrome and use it in Word documents as well. It boasts the use of 40+ different languages and dialects and shows you each correction that needs to be made, the type, and how to fix it.

3. **QuillBot**

   QuillBot is an online, AI-powered tool that offers a big list of free features including a Paraphraser, Grammar Checker, AI Detector, Plagiarism Checker, a Summarizer and even a Translator and Citation Generator. It provides these services in 4 different English dialects, 2 different German dialects, and 4 additional languages, including Dutch, French, Spanish and Brazilian Portuguese.

**Keep in mind that - while all these online resources listed are free - some require you to create an account with their platform and/or download software. Some can also be added to your Google Chrome profile as an extension, so that it will apply across all pages you visit, saving you from needing to re-visit their webpage each time you want to use it.
